(54) **Methods of, and pulse sequences for, the suppression of undesired resonances by generation of quantum coherence in NMR imaging and spectroscopy.**

(57) **Methods for generating non-single-quantum coherences and suppress single-quantum coherences, such as from water molecules, use a pulse subsequence (20), prior to a normal excitation/response signal sequence (22) in Nuclear Magnetic Resonance imaging and/or spectroscopy, to constructively sum image signals exhibiting multiple quantum behavior, while subtracting pairs of response signals originating in non-coupled-spin systems. A variety of multistep phase-cycling programs for achieving zero-quantum and multiple-quantum filtering are disclosed.**
